

A mobile reader with the best of both worlds.

The Code Reader™ 3600 (CR3600) is the latest addition to Code's advanced product line. This sleek, wireless scanner has a color screen and keypad that allows users to manually enter data in real time. The screen provides a mobile solution for users who need instant visibility to scanned information—from detailed inventory applications to event sales and management, the device handles every type of mobile barcode need.

Multiple scenarios. One reader.

CR3600 has the ability to take on more than one workflow operation at a time. A variety of applications can be created and loaded onto the reader and can be accessed with a simple touch of a button. With a single scan of a barcode users can also direct the same data set to multiple applications. These features streamline workflow processes and ultimately lower costs by reducing the need to rely on numerous scanning devices.

For ease of customization and integration, a JavaScript license is included with each device, as well as multiple applications pre-installed with source code available for download from the Code website.

The CR3600 enables businesses in mobile markets to effectively record work orders, track inventory and invoices, and immediately read data for verifications. This combination of Bluetooth functionality and high-performance barcode reading capabilities makes the CR3600 an advanced barcode reading solution.
